Summary

As a Fullstack Web Developer, I contribute to teams and help businesses by leveraging modern technology to build responsive and accessible user interfaces that delight users and move the needle for businesses.

I have experience leveraging technologies like HTML5, CSS3, Javascript (ES6 and above), React, Tailwind, NodeJS, Serverless Functions, and MongoDB to build beautiful and functional end-to-end web applications for various use cases.

I also connect to and consume functionality from various digital services through APIs, hence reducing technical costs to implementing valuable features for my employers to offer their users.

I understand UI/UX design principles and methodology, so I will work seamlessly beside design teams without any communication barriers.

Combining that with my experience trying to build my own startups and products, I understand the startup grind and a bit of digital marketing hence I have experience in building and marketing a startup for profit.

Experience

CAD Design Intern
Nigerian Navy
